PROFESSIONAL SUMMARY

Applied Data Scientist with an MSc in Data Science and commercial experience using Python and SQL across operational risk, marketing attribution and deployed data products. Builds evaluated ML and data systems spanning NLP, privacy-preserving ML and distributed processing, supported by reproducible testing, CI/CD and cloud deployment. Delivered analysis supporting a 25% reduction in risk events and a 15% reduction in handling errors.

EXPERIENCE

Data Analytics Consultant

Jan '26 — Jul '26

iO-Sphere

London, United Kingdom

- Designed a BigQuery attribution pipeline joining Google, Meta, Criteo, RTBHouse, and TikTok spend with session and transaction data; calculated CPC, CTR, CPA, and ROAS to support acquisition budget recommendations.
- Investigated a Q4 revenue spike by analysing acquisition channels, product performance and mobile conversion behaviour, translating findings into executive-style recommendations on conversion optimisation.

Risk Analyst

Jun '24 — Dec '25

SRS Storage & Logistics

London, United Kingdom

- Engineered automated SQL reporting pipelines across 44k+ operational records to identify major incident drivers, enabling targeted interventions that reduced site risk events by 25%.
- Used K-means clustering to identify risky cargo segments, reducing handling errors by 15% and informing SOPs.

SKILLS

Machine Learning & NLP scikit-learn, TensorFlow, classification, clustering (K-means, DBSCAN), gradient boosted trees, sentiment analysis, intent classification, ARIMA/SARIMAX forecasting, differential privacy

Data Engineering & Databases Python, BigQuery, SQL, PostgreSQL, pandas, NumPy, Docker, ETL/ELT, PySpark

Analytics & Visualisation Power BI (DAX, Power Query, RLS), Tableau, KPI design, RFM segmentation, forecasting

Cloud & Deployment GCP (BigQuery, Cloud Run, Cloud Storage), GitHub Actions, Streamlit, Supabase

PROJECTS

Behavioural Intent Classification & Demand Intelligence [Link](#)

May '26 — Present

- Designed an eight-class behavioural-intent taxonomy and implemented an explainable rule-based NLP baseline combining ordered regex patterns, sentiment signals and log-scaled engagement
- Benchmarked interpretable rule-based classification against TF-IDF Logistic Regression and SVM models, separating behavioural intent classification, and actionable signal ranking.
- Built a manually corrected 200-row evaluation corpus across 23 discussion groups, implementing group-aware holdouts, repeated-seed evaluation, leakage tests and class-specific precision regression tests.

Privacy-Preserving Machine Learning & Empirical Privacy Auditing [Link](#)

Jun '23 — Present

- Re-engineered MSc research into a reusable privacy-preserving ML benchmark implementing DP-SGD, formal RDP accounting, fairness analysis and membership-inference auditing.
- Evaluated privacy budgets down to approximately $\epsilon=0.49$, retaining up to 98% of non-private utility while measuring empirical leakage using loss-threshold and LiRA attacks.

Restaurant Ordering & Operations Platform [Link](#)

Mar '26 — May '26

- Built and deployed a production ordering and kitchen-operations platform for a live restaurant client using React, Supabase/PostgreSQL, Stripe and Vercel.
- Implemented server-authoritative pricing, webhook payment verification, row-level security, idempotent order handling, realtime kitchen updates and CI-gated deployments.

EDUCATION

MSc in Data Science (Merit), City St George's, University of London

Oct '22 — Jan '24
London, United Kingdom

BEng in Electrical & Electronic Engineering (2:1), City St George's, University of London

Oct '18 — Jun '22
London, United Kingdom

CERTIFICATIONS

CompTIA Data +, CompTIA

May '26

Power BI Data Analyst (PL-300), Microsoft

Jan '25

GCP Professional Data Engineer, Google

Jan '25
